Predictive Services Discussion

Warm and dry through Wednesday, then colder Thursday through Sunday with good chance of rain and mountain snow for the Northwest, Idaho, Montana, and Wyoming. A high pressure ridge will continue warm and dry weather for most of the West today. Winds will increase today and continue through Thursday over much of the northwest quarter of the country ahead of a strong low pressure system. The weather system will bring widespread rain and mountain snow to most of the Northwest, Idaho, Montana, and Wyoming Thursday through Sunday. Another weather system is on tap for early next week with additional precipitation for the same areas.

http://www.nifc.gov/sixminutes/dsp_sixminutes.php

EXTREME FIRE BEHAVIOR

Extreme fire behavior has always been present in cases of shelter deployment. It is critical for firefighters to maintain situational awareness of live and dead fuel moisture conditions as well as predicted and current weather conditions. As fire behavior changes, it is critical to act decisively to the changing situation.

● Discuss the following indicators of extreme fire behavior:

- Relative humidity less than 15%
- 1-hour fuel moisture less than 5%
- Trees crowning inside the fireline
- Smoldering fires that exist in the early part of the day are beginning to burn very actively as the day progresses.
- Approaching thunderheads with dark clouds beneath
- Presence of dust devils indicating an unstable atmosphere
- Increased spotting
- Sudden calm
- High clouds moving fast in direction different from surface wind
- Predicted Haines Index of 5 and 6 in those areas where this level is a good indicator of atmospheric instability
